

PlasPLUS - Project pictures - July 2020

Plastic-rich shredder residues stockpiled on Comet Traitements industrial site to be treated in LIFE PlasPLUS project.

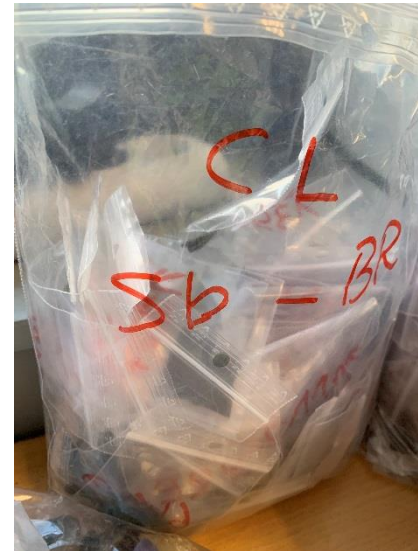

Sampling and analysis of separated thermoplastics fragments on Comet Traitements industrial site.

This material will be shipped to ULiège for testing and calibration of PICKIT automated multi-class sensor-based sorting and separation pilot line.

Froth flotation installation on Comet Traitements industrial site to be used in in LIFE PlasPLUS project.

PICKIT will then selectively isolate Flame Retardant Plastics for further treatment in the LIFE PlasPLUS project.
